Write a JavaScript, HTML, and PHP program that guess the server selected fruit as shown below. The JavaScript function should get the fruit name from the fruit list and save it in a hidden input. The fruit name and number should be sent to the server. The server should generate a random number from 1 to 10 to show the selected fruit image. Use the same shown text and alignment for the correct and wrong guess.

HTML, JS file

PHP file- try 1

PHP file- try 2
